No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score

The invention relates to a novel enterohaemorragic Escherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                        Enterohemorragic Escherichia coli 0157:H7-specific nucleic and a polypeptide and its use, a polypeptide, a vector and

The present invention relates to a computational method (MI) for clidentifying adhesin and adhesin-like proteins, by computing the sequence based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for ceach of the computed five attributes, and identifying the adhesin and cadhesin-like proteins having probability of being an adhesin (Pad) as cerocoding adhesin and adhesin-like proteins, having 274 fully defined 162-cerocoding adhesin and adhesin-like proteins, having 274 fully defined 162-cerocoding adhesin and adhesin-like proteins, having 105 fully defined 306-15876 base pairs (SEQ ID NO: 659-763); a set of 1279 annotated cadhesin and adhesin-like proteins, having 105 fully defined 30-3716 base pair (SEQ ID NO: 1279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 33-3716 base pair (SEQ ID NO: 1279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base pair (SEQ ID NO: 1279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base pair (SEQ ID NO: 1279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying adhesin and adhesin-like proteins, of therapeutic potential, and identifying and short-listing conceins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms. (M1) is useful for identifying and short-listing conceins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms, (M1) is capable of proteins bequence of a wide of pathogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                            CC The present invention relates to novel EspFU polypeptides and their CC corresponding polynucleotides. The EspFU polypeptides are EspF-like CC polypeptides encoded by genes of the cryptic prophage CP-93JU of CC enterohemorrhagic Escherichia coli (EHEC) or enteropathogenic Escherichia coli (EPEC) that binds to a neuronal wiskott-aldrich syndrome protein (N-CC WASP) polypeptide or restores the actin pedestal formation activity of enteropathogenic E. coli (EPEC) strain KC12. The invention further CC relates to a method of identifying a candidate compounds capable of binding to and/or modulating the activity of EspFU and compounds that CC binding to and/or modulating the activity of EspFU and EspFU-interacting proteins such as N-WASP, transducer of Cdc42-dependent actin assembly-1 (Toca-1) and p21-activated kinase 1 (Pakl). EspFU polynucleotides are useful for treating EHEC infection. EspFU antibody is useful for treating EHEC infection. The present sequence is the conterohemorrhagic Escherichia coli translocated intimin receptor (Tir) protein. This sequence is critical for the formation of actin pedestals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  문

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents Tir, a novel translocated intimin CC receptor (formerly termed Hp90) from an enterphaemorrhagic Escherichia Cc coli (EHEC) strain. The sequence was deduced from an isolated tir Cc polynucleotide (see AAXS8859). Tir proteins are secreted by attaching and CC effacing pathogens such as EHEC and EPEC (see AAV66220) E. coli. The CC surfaces, to which the pathogen then adheres to trigger additional host CC signaling events and actin nucleation. Diagnosis of disease caused by attogenic E. coli can be performed by use of antibodies that bind to Tir CC pathogenic E. coli can be performed by use of antibodies that bind to Tir CC ucleic acids encoding Tir polypeptide. Isolated Tir nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, antibodies which bind to Tir, and a kit for the detection of Tir-producing E. coli care provided. A method of immunising a host with Tir to induce a corotective immune response is also provided. In addition, Tir fusion CC protective immune response is also provided. In addition, Tir fusion CC content polypeptides, e.g. antigens. A method for CC screening for compounds which interfere with the binding of bacterial CC pathogens to their receptors is further provided
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the N-terminal sequence of Tir (see also AAY06220), a novel translocated intimin receptor from an enteropathogenic Escherichia coli (EPEC) strain. The 78 Me EPEC protein is secreted by the bacterial pathogen. Diagnosis of disease caused by pathogenic E coli can be performed by use of antibodies that bind to Tir to detect the protein, or the use of nucleic acid probes for detection of nucleic acids encoding Tir. A kit for the detection of Tir-producing E. coli is provided. Also provided are a method of immunising a host with Tir to induce a protective immune response, and a method for screening for compounds which interfere with the binding of bacterial pathogens to

Isolated Tir nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, antibodies which bind to Tir, and a kit for the detection of Tir-producing E. coli are provided. A method of immunising a host with Tir to induce a protective immune response is also provided. In addition, Tir fusion protective immune response is also provided. In addition, Tir fusion protecting can be used in attenuated E. coli to induce a cell-mediated immune response to other polypeptides, e.g. antigens. A method for screening for compounds which interfere with the binding of bacterial

This immunogen can induce protective immunity against S. aureus. The immunogen is administered at a dosage of 1 microg-1 mg, subcutaneously, intramuscularly or mucosally. It is used for inducing protective immune response in a patient e.g. human for treating prophylactically against Staphylococcus aureus infection. The polypeptide immunogen provides protective immunity against Staphylococcus aureus. This sequence shares 85% homology to ORF0826 but is excluded from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-DEC-2005.

CC producing hyperimmune serum-reactive antigens from a pathogen, tumour, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma CC pool of a type of animal, or individual sera with antibodies against the immunity. The hyperimmune serum-reactive antigens comprising any of the cimunity. The hyperimmune serum-reactive antigens comprising any of the CC sequences of 53-2561 amino acids fully defined in the specification, or their hyperimmune fragments are useful for the manufacture of a CC or their hyperimmune fragments are useful for the manufacture of a CC infections or colonisation, particularly a vaccine against staphylococcal infections or colonisation against S. aureus or S. epidermidis. The CC preparation of antibodies is useful for the manufacture of a medicament CC for treating or preventing staphylococcal infections or colonisation cCC against S. aureus or S. epidermidis. The antibody preparations may also be used for diagnostic and imaging purposes. Other conditions that can be created include cancer, autoimmune diseases or infections caused by viral CC treated include cancer, autoimmune diseases or relating to the method for infections a staphylococcal protozoan pathogens. This capture felicity and account antibody preparation of the method for infections of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, for preparing vaccine or medicament for treating or preventing e.g. staphylococcal infections, comprises providing antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for identifying,

antigen Ssa. This immunogen can induce protective immunity against S. aureus. The immunogen can induce protective immunity against S. subcutaneously, intramuscularly or mucosally. It is used for inducing protective immunity against s. apatient e.g. human for treating prophylactically against Staphylococcus aureus infection. The polypept immunogen provides protective immunity against Staphylococcus aureus traphylococcus aureus. This sequence shares 85% homology to ORF0826 but is excluded from the scope of the invention.
                                                                                                                                                                                                            ORF0826

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AEE26470
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                 This sequence represents a polypeptide related to the immunogen,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AEE26470 standard;

                                                                                                                      This sequence represents a polypeptide related to the immunogen, ORF08 ORF0826 shares a high degree of homology with S. epidermis secreted antigen Ssa. This immunogen can induce protective immunity against S. aureus. The immunogen is administered at a dosage of 1 microg-1 mg, subcutaneously, intramuscularly or mucosally. It is used for inducing protective immune response in a patient e.g. human for treating prophylactically against Staphylococcus aureus infection. The polypept immunogen provides protective immunity against Staphylococcus aureus. This sequence shares 85% homology to ORF0826 but is excluded from the scope of the invention.
                                                                                               Sequence 166

ORF0826 shares a high degree of homology with S. epidermis secreted antigen Ssa. This immunogen can induce protective immunity against S. aureus. The immunogen is administered at a dosage of 1 microg-1 mg, subcutaneously, intramuscularly or mucosally. It is used for inducing protective immune response in a patient e.g. human for treating prophylactically against Staphylococcus aureus infection. The polypeptide immunogen provides protective immunity against Staphylococcus aureus. This sequence was included for comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 166 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 1; SEQ ID NO 6; 28pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           derivative of Staphylococcus aureus polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptide immunogen useful for inducing protective immunity against Staphylococcus aureus comprises amino acid sequence, which is similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Anderson

ORF0826 shares a high degree of homology with S. epidermis secreted antigen Ssa. This immunogen can induce protective immunity against S. aureus. The immunogen is administered at a dosage of 1 microg-1 mg, subcutaneously, intramuscularly or mucosally. It is used for inducing protective immune response in a patient e.g. human for treating prophylactically against Staphylococcus aureus infection. The polypeptide immunogen provides protective immunity against Staphylococcus immunity against Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polypeptide immunogen useful for inducing protective Staphylococcus aureus comprises amino acid sequence, derivative of Staphylococcus aureus polypeptide.
                                                                                                                                                                                                                                                                                                                                         Vaccine; Gene-therapy; Staphylococcus aureus;

This sequence represents a polypeptide m from which the immunogen, ORF0826, is derived. ORF0826 shares a high degree of homology with S. epidermis secreted antigen Saa. This immunogen can induce protective immunity against S. aureus. The immunogen is administered at a dosage

a dosage

œ,

epidermis secreted a immunity against S.

                                                                                                                               The invention relates to a chitinase (I) comprising a chitin binding domain (D1) connected to a catalytically active domain (D2) comprising the 289 amino acid sequence of ABF20209, or ABF20209 in which one or more amino acids being deleted, substituted or added, through a direct or a connecting region. Also described: (1) a DNA (II) encoding (I); (2) a recombinant vector (III) containing (II); (3) a transformed host (IV) containing (IIII); and (4) producing (I). (I) is useful for hydrolyzing chitin. (I) exhibits high activity and stability, even at high temperature. The present sequence represents a Pyrococcus furiosus chitinase connection region amino acid sequence, which is given in the exemplification of the present invention.
                                                                                                           Sequence 81
                                                                                                                                                                                                                                                                                                     Claim 4; SEQ ID NO 6; 15pp; Japanese
                                                                                                                                                                                                                                                                                                                               Novel chitinase comprising a chitin binding domain connected to a catalytically active domain, through a direct or connecting region, useful for hydrolyzing chitin.
                                                                                                                                                                                                                                                                                                                                                                                              N-PSDB; AEF20218.

GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO AG
TITLE OF INVENTION: FOR DIAGNOSTICS AND THEE
FILE REFERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR FILING DATE: 1998-02-13

RESULT 15 US-11-097-143-38604

Sequence 38604, Application US/11097143 Publication No. US20050208558A1 GENERAL INFORMATION:

Venter, J. Craig

```
APPLICANT: et al.

TITLE OF INVENTION: DETECTION KIT, SUCH AS NUCLEIC ACID

TITLE OF INVENTION: DETECTING EXPRESSION OF 10,000 OR MORE

TITLE OF INVENTION: DESOSOPHILA GENES.

FILE REFERENCE: CLORO728

CURRENT APPLICATION NUMBER: US/11/97,143

CURRENT FILING DATE: 1999-10-95

PRIOR APPLICATION NUMBER: 60/161,932

PRIOR APPLICATION NUMBER: 60/164,769

PRIOR APPLICATION NUMBER: 60/164,769
